1 Introduction

ElyaCoin is a native cryptocurrency of ElyaTel. ElyaTel is a provider of telecommunication services, including international roaming and IT solutions, trading since 2009, registered trademark since 2010, currently operating in 120 countries, providing GSM 900 / 3G / 4G global roaming and served over 500,000 customers worldwide. The key distinctive feature of our services from other telecommunication service providers is the entire (complete) anonymity of

users, that is why our services became the primary choice when security and confidentiality of information is crucial. The core of our idea is to provide anonymous Elya SIM cards that can be paid with anonymous ElyaCoins.

2 Problems and Challenges

Despite the telecommunication services are widely used in our everyday life, still the users and especially frequent travelers may face number of problems, especially using prepaid SIM cards services:

- Most of telecommunication operators do not accept payment for their services in cryptocurrencies.
- As a prepaid SIM card user, once you top up your account, you can use it only for services connected to your telecommunication provider.
- If you have funds on your prepaid SIM card you are not able to transfer them to your other SIM card in case you run out of funds on your other number.
- Suppose you want to terminate your prepaid service, you will not be able to claim or get your funds back.
- Any unused balance on your prepaid SIM card considered to be lost after few months the card is not in use.

3 Solution :

- Unlike most of telecommunication operators our system provides a unique feature, any SIM card holder is capable to top up the card in a local currency, cryptocurrency and send it to the balance of other mobile phone.

Other benefits:

- We are trading since 2009, registered trademark since 2010, currently operating in 120 countries, providing GSM 900 / 3G / 4G global roaming and served over 500,000 customers worldwide.
- Our SIM cards allow users to transfer funds abroad just like any financial service providers as Western Union, Money Gram etc., but paying 0 commission fee and avoiding any hidden charges whatsoever. Thus, we are able to offer commission free alternative for anyone willing to transfer funds abroad. We are promoting our service and expanding our business even further in order to benefit as many customers as possible.
- Users can credit balance with Elya and let the credit there as long as they decide to.
- Credit can be converted your into BTC and fiat again, by being sent back to a credit card .
- The possibility to manually switch from one to another network provider worldwide, so the best coverage ever is

provided.

4 What is ELYA coin:

ElyCoin is already listed on Digital Currency Exchanges being traded on stocks.exchange and Altex with forthcoming listings on Tradeogre (June 2018), CryptoBridge, currenexchange (July 2018), and coinexchange.

ElyCoin can be used to buy a SIM card and top up balance in order to use GSM 900/3G/4G global roaming in 120 countries.

ElyCoin can be bought directly with a credit card Visa/Mastercard through Elya website <https://elyatel.com>

ELYA coins can be stored on a simcard balance and sent to another phone.

ELYA can be transformed on top up codes in order to be sent to family abroad.

ELYA can be mined with the rigs because we implement env7.

Maximum supply is 1b.

ELYA phone number is UK number with a global roaming, it cannot be spied on and completely anonymous, as well as we do not disclose the ID to anyone and we have no way to know the origin of the ELYA Coins that we receive on the top up wallet.

Thus ELYA coin is 100% anonymous and we collect 0 data on ELYA sim.

There are other awesome figures as well that we do not advertise publicly, but we share privately in PM with customers who already bought their simcards.

Overall ELYA is a 100% anonymous worldwide chain for finance telecommunication and mining. A mineable coin for anonymous communications.

5 Payment Methods : Buy ELYA with Visa, Mastercard or Cryptocurrency.

6 Future of ELYA Coins:

Our plans are to use ELYA coins for variety of payments such as purchase of goods and services online, including integrating the coin on online casino sites as currency for gambling.

But the major strength of ELYA is ability to implement credit card processing (achieved in may 2018), so ELYA will soon become a popular and convenient way to buy Cryptocurrencies by processing payments through VISA and MasterCard.

Despite the majority of banks do not accept purchase of Crypto currencies, but no banks can decline VISA and MasterCard payments aimed at purchase of airtime, phone account Top Up or SIM cards purchasing.

ELYA Team and why you can trust us regarding respecting your privacy:

We have a multi-skilled team from different industries.

The team of ELYA speaks a number of languages including English, French, Italian, Spanish, Russian, Hebrew, Chinese, Thai.

Members of the team dedicated 20 years to privacy protection and computer security.

CEO David Nataf is an active in Law Practice in the field of computer security and protection against global interceptions, quoted in books regarding computer crime, security and information warfare.

L'hyper-république: [L'administration électronique au service du citoyen](#)

[Information Technology](#) By Prof Ramesh CHANDRA

Most of team members know each other since childhood and/or family and/or 20 years being best friends.

Programmer has 25 years of experience that CEO knows since 20 years, who has developed successful mining application and perfect wallets.

We are community driven and strongly linked to our community. We listen to the community, we follow the advice of the community and we accept and reward any initiative coming from the community.

As an example, the ASIC resistance CN7 was implemented by one of the developers of Karbo in person himself being a member of the community.

We developed fully a new coin ELYA2 with POS and Masternode in April 2018 but it's also would have compromised the most important (if not the only) angular stone of ELYA : total privacy of payments, mobility and communications. Then we waited one month that Karbo releases ASIC resistance and they chose to welcome ASICS. We could achieve ASIC resistance because a member of community introduced us to one of most experienced dev of Karbo expert of implementation of ASIC resistant CN7...

Ubuntu Linux wallet was added by a member of the community.

Community is taking more and more role in the development of the Coin and the applications: several members of the community are becoming distributors of the ELYA sim in their hometown.

We welcome and we are open to any suggestions and we reward the contribution of our community to the success of our project.
